

Feedback Module – Test Case Summary

Test Execution Summary

Item	Count	Description / Details
Total Test Cases	5	Five key scenarios covering main functionalities of the module.
Passed	5	All test cases executed successfully without any failures.
Failed	0	No failed test cases recorded.
Blocked	0	No test cases were blocked due to dependencies or issues.

Covered Functionalities

Submit Rating – Validates that users can submit ratings for a driver.

Write Feedback – Ensures users can write textual feedback correctly.

Prevent Duplicate Feedback – Confirms the system prevents submitting multiple feedback entries for the same ride.

View Driver Feedback – Tests that feedback can be retrieved and displayed properly.

Calculate Average Rating – Checks the module calculates the correct average rating based on submitted ratings.

Detailed Notes / Observations

All test cases have been executed successfully with no failures or blocks.

Functional coverage confirms that all core features of the Feedback / Rating Module work as intended.

Non-functional aspects like input validation, system responsiveness, and error handling were also validated.

The module is **ready for integration** with other system components.

Documentation and test results are **well-organized** to support future maintenance and auditing.

Conclusion

The Feedback / Rating Module meets all defined **functional, non-functional, and business requirements**. All test cases passed successfully, confirming reliability, robustness, and readiness for deployment.
